Note: According with Decision 2020/1729, streptomycin was excluded from the panels of antimicrobials for *Campylobacter* and therefore no resistant data are provided on this substance starting from 2021. Trend for resistance to streptomycin was only assessed until 2020 and corresponding results are not presented in this table. For details on trend results related to streptomycin see 'The European Union Summary Report on Antimicrobial Resistance in zoonotic and indicator bacteria from humans, animals and food in 2019/2020' (<https://doi.org/10.2903/j.efsa.2022.7209>). Trends resistance to streptomycin are also presented in figures 1 and 2 of this Annex, as these trend graphs only present data up to 2020.

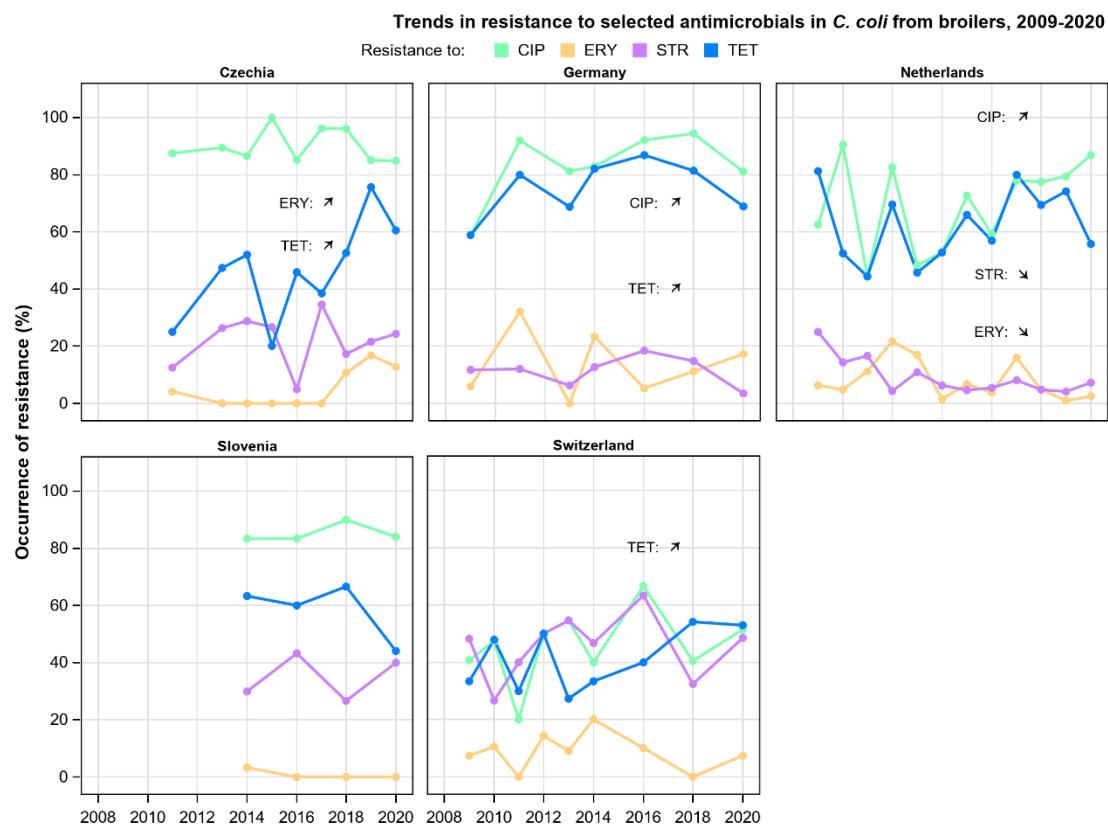

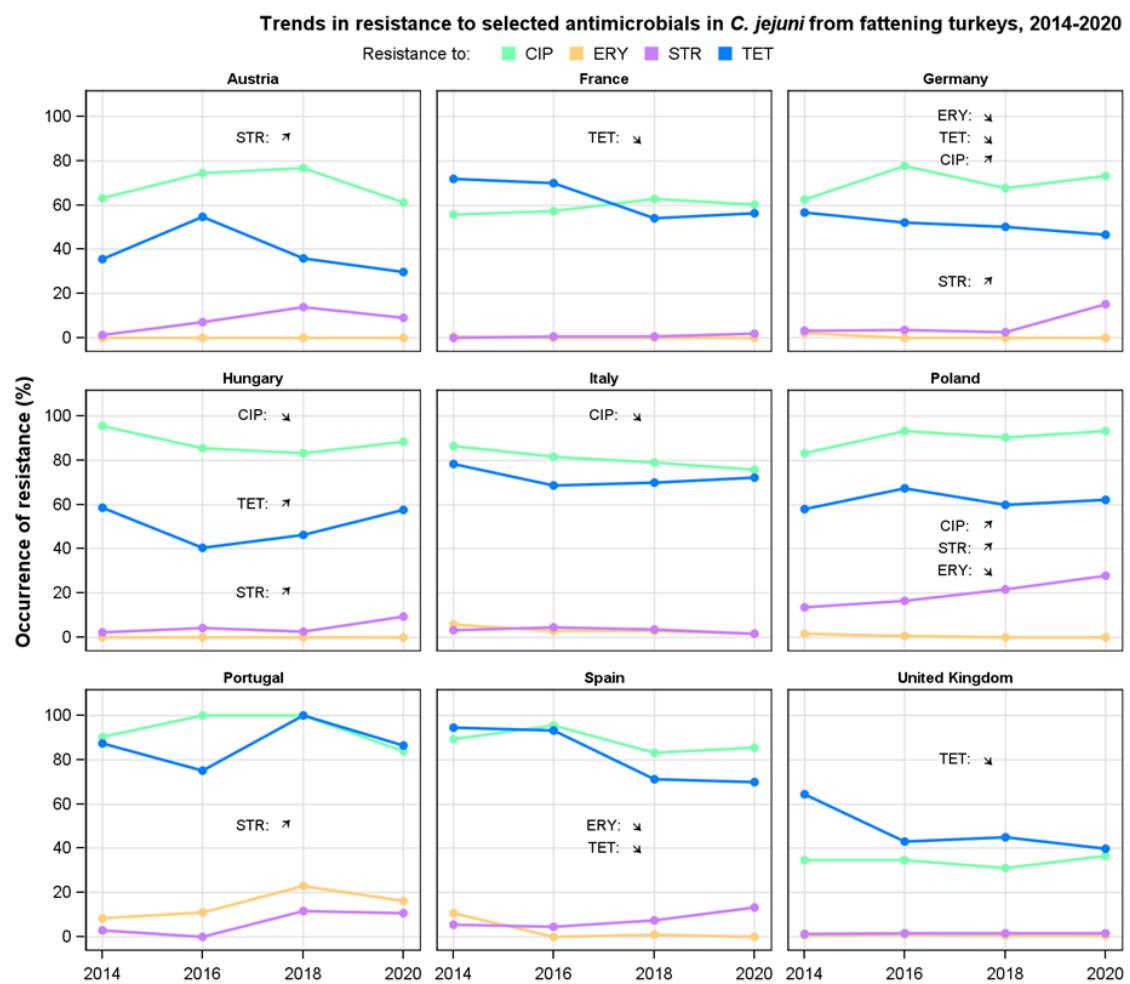

Figure 1: Trends in ciprofloxacin (CIP), erythromycin (ERY), streptomycin (STR) and tetracycline (TET) resistance in (a) *C. jejuni* and (b) *C. coli* from broilers, 2009–2020.

CIP: ciprofloxacin; ERY: erythromycin; STR: streptomycin; TET: tetracycline. Arrows indicate significant increasing (up) or decreasing (down) trend over the entire period.

Figure 2: Trends in ciprofloxacin (CIP), erythromycin (ERY), streptomycin (STR) and tetracycline (TET) resistance in *C. jejuni* from fattening turkeys, 2014–2020

Table 31: Number of isolates exhibiting different levels of erythromycin resistance (low and high) in broilers, fattening turkeys, pigs and calves in reporting EU MSs and non-EU MSs, 2020–2021.

| C. Species | Animals | N total isolates exhibiting ERY resistance | Ecoff < MIC ≤ 128 mg/L | MIC > 128 mg/L | 128 mg/L < MIC ≤ 512 mg/L | MIC > 512 mg/L |
