**TESSy - The European Surveillance System**

**Hepatitis of unknown origin**

**Reporting Protocol 2022**

**Version 4.0**

14 October 2022

# Contents

# Change log

**Summary of changes in this reporting protocol**

V4.0 (14 October 2022)

1. Deleted variables: PlaceOfResidence, SARSCoV2VaccLastDate, SARSCoV2VaccLastBrand, PeakALT, PeakAST, PeakBilirubin, PeakINR, AdenoCtValueSpecimenDate, ADVSequence, OtherTypingResult, CMVResult, EBVResult, EnterovBloodResult, EnterovThroatResult, HSV1Result, LeptoResult, HHV7Result, RSVResult, INFLResult, RhinoResult, hMPVResult, VaricellaResult, ParvovirusResult, HIVResult, LegionellaResult, MycoplasmaResult, ParainfluenzaResult, ASOTResult, BocavirusResult, BrucellaResult, BartonellaResult, BorreliaResult, StoolBacterialPCRResult, StoolBacCultDone, StoolBacCultResult, ThroatBacCultDone, ThroatBacCultResult, ToxResult, JAUNDICEFAM, SARSCoV2FAM

V3.0 (2 June 2022)

1. Added variables *DateOfDischarge*; *MetagenomicsLabID*; *AdenoAssociatedVirusResultPCR*; *AdenoAssociatedVirusSpecimen*; *AdenoAssociatedVirusType*; *AdenoAssociatedVirusCtValue*; *AdenoAssociatedVirusSpecimenDate*

V2.1 (6 May 2022)

1. Added variables *Hospitalisation*; *AdenoUrineResult*; *AdenoUrineDate*; *AdenoUnknownSpecimenResult*; *AdenoUnknownSpecimenDate*; *AdenoCtValue*; *AdenoCtValueSpecimenDate*; *AdenotypeSpecimen*; *AdenoSeqDone*; *ADVSequence*; *OtherTypingResult*; *RhinoResult*; *hMPVResult*; *BrucellaResult*; *BartonellaResult*; *BorreliaResult*; *StoolBacterialPCRResult*; *AdditionalInfo*

2. Added "DISC" (discarded case) to coded value list for variable *Classification*

3. Added "IgM, IgG, IgMIgG" to coded value list for variable *SARSCoV2Serology*

4. Added "OTHCOR" to coded value list for variable *PrevInfectionDetails*

5. Added "SEPSIS" to coded value list for variable *Complications*

6. Added "ADENO", "ROTA", "ASTRO" to coded value list for variable *StoolViralPCRResult*

V2.0 (29 April 2022)

1. Note added to case definition

2. Added "Epi-linked" to and removed "Confirmed" from coded value list for variable *Classification*

3. Variable *ClinicalPresentation* renamed to *PreviousClinicalPresentation*

4. Variable *ClinicalPresentationOther* renamed to *PreviousClinicalPresentationOther*

5. Variable *Adenotype* renamed to *AdenovType* and defined as text

6. Added "Other" to coded value list for variable *Complications*. Variable configured as repeatable

7. Added "WAITTRANS" (waiting for transplant) to coded value list of variable *Transplant* and removed from variable *Outcome*

8. Added variables *PlaceofResidence*; *PrevInfection*; *PrevInfectionDetails*; *PrevInfectionDetailsOther*; *ComplicationsOther*; *PeakBilirubin*; *PeakINR*;

*DateOfPrevSARSCoV2*; *SARSCoV2VaccLastDate*; *SARSCoV2VaccLastBrand*; *AdenoStoolDate*; *AdenoRespDate*; *AdenoWholeBloodDate*; *AdenoSerumDate*; *AdenoOtherDate*; *SARSCoV2PCRDate*

9. Variable *PeakASP* removed

V1.0 (25 April 2022)

# Introduction

This reporting protocol is intended for reporting national case-based data for surveillance of hepatitis of unknown origin from all the countries and areas of the WHO European Region, including the 27 countries of the European Union (EU) and the additional three countries of the European Economic Area (EEA), to the European level.

Data are submitted through the case-based record type NOVHEP to the European Surveillance System (TESSy) database hosted at ECDC.

Data can be reported to TESSy either manually, for entry of single cases, or through metadata-standardised csv or xml files for multiple cases (please see technical annex).

Case data should be entered manually into TESSy as soon as possible, and retrospective updates should be submitted through metadata-standardised csv or xml files at least monthly, on the Wednesday (10:00) preceding the publication of the surveillance report (usually last Friday of the month).

This reporting protocol is supplemented by a technical annex, which contains updated generic information for data submission.

## Case Definition

Cases of hepatitis of unknown origin should be reported to TESSy if they meet any of the following criteria:

- **Confirmed**: N/A
- **Probable**: A person presenting with an acute hepatitis (non-hepatitis viruses A, B, C, D and E*) with aspartate transaminase (AST) or alanine transaminase (ALT) over 500 IU/L, who is 16 years old or younger, since 1 October 2021.
- **Epi-linked**: A person presenting with an acute hepatitis (non-hepatitis viruses A, B, C, D and E*) of any age who is a close contact of a probable case since 1 October 2021.
- **Discarded**: A subject previously classified as case, that following further investigations did not meet the case definition criteria.

*Cases of hepatitis with known aetiology such those due to specific infectious diseases, drug toxicity, metabolic hereditary, or autoimmune disorders should not be reported under this protocol.

## Surveillance Objectives

1. To understand the magnitude and spread of this novel public health threat in the WHO European region to inform a proportionate response
2. To generate hypotheses about disease aetiology in order to guide investigations and initial preventive or control measures
3. To describe the population at highest risk of infection and severe outcomes in order to target preventive or control measures
4. To understand the natural history of disease in order to assess its impact and prepare accordingly

## Key variables

Although the current version of the reporting protocol includes a significant number of variables, Member States are strongly encouraged to report data as soon as possible (please see section Data collection schedule), even if incomplete or provisional, so Surveillance Objective 1 can be fulfilled. In

case there is the need to discard a case, its classification can be updated so it is removed from analysis.

The variables that are currently considered key include:

- *Age* (mandatory)
- *Classification* (mandatory: Probable, Epi-linked, Discarded)
- *DateOfOnset* (date of onset of first symptoms of disease)
- *DateOfHospitalisation* (date of hospitalisation)
- *AdmittedICUHDU* (whether admitted to intensive care unit or high-dependency unit.)
- *Transplant* (whether case received or is waiting for liver transplant)
- *Outcome* (mandatory: recovered, deceased, still on medical treatment)
- Variables related to adenovirus and SARS-CoV-2 testing and results (please see section Laboratory findings)

# How to use this document

This reporting protocol provides information for data managers in reporting countries in two main sections:

- *Reporting to TESSy* – contains guidelines on how to prepare data for submission to TESSy, deadlines and links to further information.

- *Annex - Hepatitis of unknown origin metadata* – the metadata set for the subject covered by this reporting protocol.

# Finding further information

Paragraphs denoted by the information icon tell where you can find further information.

Updated links to all the schedules, documentation and training materials mentioned are included in *TESSy Technical Guidelines & Tools* (see the menu 'Technical Guidelines and Tools' when logged in to TESSy), including:

- Metadata sets and history

- Tutorials for data transformation using respectively Excel and Access

- TESSy user documentation

- *CSV* and *XML* transport protocols.

# Copyright

© European Centre for Disease Prevention and Control, 2022. Reproduction is authorised, provided the source is acknowledged.

# Reporting to TESSy

This section provides both an overview of the TESSy reporting process and tips on where you can find useful information.

The overall process includes:

1. Familiarising yourself with the data collection deadlines
2. Preparing (exporting and transforming) your data
3. Checking that your data comply with the metadata
4. Checking that your data source profile is up to date
5. Submitting your data to TESSy
6. Finalising and approving your submission.

## Data collection schedule

Case data should be entered manually into TESSy as soon as possible, and retrospective updates should be submitted through metadata-standardised csv or xml files at least monthly, on the Wednesday (10:00) preceding the publication of the surveillance report (usually last Friday of the month). Data should be submitted by Wednesday by 10:00, including retrospective updates to cases diagnosed/reported previously).

The following reporting routine is suggested:

1. Report a first timely dataset with the core set of variables (please see section Key variables)
2. Update cases with additional testing results or new case classification, not available at the time of initial report (please see section Submitting your data, "replace" options)

## Preparing data

Data relating to new cases should be entered directly in TESSy for individual records ('Manually create a record'). For any retrospective updates by file upload (CSV or XML format), please note that the data need to be in a format that TESSy accepts (see "checking metadata").

Tutorials covering how you can transform your data to the correct TESSy format using Excel or Access are available on the *TESSy documents website*. Information on the file formats is available in the *CSV Transport Protocol* and *XML Transport Protocol*.

## Checking metadata

The TESSy metadata define the fields and data formats valid for a given subject. They are updated in agreement with disease and surveillance networks when public health information needs change.

It is especially important to focus on the following areas.

- **Field formats**

  Many fields require that data are formatted in a specific way. For example, dates must be in the YYYY-MM-DD format; dates in the DD/MM/YYYY format will be rejected.

- **Coded values**

  Some fields only permit the use of specific values (coded values). For example, **M**, **F**, **UNK**, or **Other** are the coded values for *Gender* and any other value in a *Gender* field will be rejected.

- **Repeatable fields**

  For variables where multiple items of the coded value list apply, the field should be repeated as needed to include only one item per field. If not applicable, use N/A.

The metadata file contains all the definitions and rules you need to comply with to format your data correctly. The file can be downloaded as an Excel file from the TESSy documents website.

By filtering the fields in the file by subject, you can see the fields required for your subject and the rules applying to these fields.

ⓘ The *Tessy User Guide* provides instructions on how you work with the metadata file.

## Checking your data source profile

Before submitting your data, please review the profile for your data source(s) in TESSy (go to **Data Sources**), and update the information, if necessary.

| Home | Upload | Review | Query | Reports | Data sources | My profile | Documents |

Complete and up-to-date data source information for each subject facilitates surveillance data interpretation - each surveillance system has different features that need to be considered when comparing data at international level.

If your data source information is outdated and you do not have access rights to update it, please ask your National Focal Point for Surveillance or National Coordinator to do so.

ⓘ In-depth information on the data source variables is available in the TESSy user documentation.

## Submitting your data

Data are submitted through the TESSy web interface (go to **Upload**).

| Home | Upload | Review | Query | Reports | Data sources | My profile | Documents |

ⓘ The *Tessy User Guide* provides instructions on how to submit files to TESSy, and the TESSy user documentation provides in-depth descriptions of all the upload methods.

The screenshot below shows the different options available for NOVHEP data submissions, including manual submissions (individual records), zero reporting and CSV/XML uploads.

# Finalising your submission

The compliance of your data with the validation rules in the metadata is checked automatically during the data upload process.

The result of your upload – i.e. rejected or validated – is displayed immediately after the conclusion of the check in the **Validation details** webpage. Please review the result carefully:

- If your file has been rejected, there will be a message explaining each instance of non-compliance with the metadata that you need to correct.
- If your file has been validated, there might be warnings and remarks relating to possible data quality issues or to potential overwriting of existing records that you should consider.

When you file has been validated and you are satisfied that all corrections have been made, please ensure prompt approval – unapproved uploads can block the approval of other uploads.

The TESSy user documentation provides information on reviewing validation results and adjusting reporting periods to avoid overwriting existing records.

General training and guidance on reporting is available on the *TESSy website*.

# Annex - Hepatitis of unknown origin metadata

## Revisions of metadata set

The most recent metadata set is available from the TESSy website under the "Technical Guidelines & Tools" tab (as shown below).

| Home | Upload | Review | Query | Reports | Data sources | Network workspace | My profile | **Documents** |

| General Documents | Communication | Guides And Training | Disease Specific | **Technical Guidelines & Tools** | Contact Help Desk |

When you open a metadata set, the tab 'Changes' lists historical changes.

| READ ME | **Changes** | Subjects | Variables | Coded values | Understanding validation rules | Validation rules | Data sources (2018-12-07) |
## Current record type versions

Table 1 shows the record type versions to be used when reporting hepatitis of unknown origin surveillance data to TESSy.

*Table 1: Current record type version for hepatitis of unknown origin*

| Record Type | Type of data | Record type version |
|---|---|---|
| NOVHEP | Case-based | 4 |
| NOVHEP | Case-based | 3 |
| NOVHEP | Case-based | 2 - deactivated |
| NOVHEP | Case-based | 1 - deactivated |

## Changes to hepatitis of unknown origin surveillance metadata

**Record type NOVHEP Version 4 – 14 October 2022**

Inactivated variables (from NOVHEP v3): PlaceOfResidence, SARSCoV2VaccLastDate, SARSCoV2VaccLastBrand, PeakALT, PeakAST, PeakBilirubin, PeakINR, AdenoCtValueSpecimenDate, ADVSequence, OtherTypingResult, CMVResult, EBVResult, EnterovBloodResult, EnterovThroatResult, HSV1Result, LeptoResult, HHV7Result, RSVResult, INFLResult, RhinoResult, hMPVResult, VaricellaResult, ParvovirusResult, HIVResult, LegionellaResult, MycoplasmaResult, ParainfluenzaResult, ASOTResult, BocavirusResult, BrucellaResult, BartonellaResult, BorreliaResult, StoolBacterialPCRResult, StoolBacCultDone, StoolBacCultResult, ThroatBacCultDone, ThroatBacCultResult, ToxResult, JAUNDICEFAM, SARSCoV2FAM

**Record type NOVHEP Version 3 – 2 June 2022**

New variables: *DateOfDischarge*; *MetagenomicsLabID*; *AdenoAssociatedVirusResultPCR*; *AdenoAssociatedVirusSpecimen*; *AdenoAssociatedVirusType*; *AdenoAssociatedVirusCtValue*; *AdenoAssociatedVirusSpecimenDate*

**Record type NOVHEP Version 2 – 29 April 2022**

New variables: *PlaceofResidence*; *PrevInfection*; *PrevInfectionDetails*; *PrevInfectionDetailsOther*; *ComplicationsOther*; *DateOfPrevSARSCoV2*; *SARSCoV2VaccLastDate*; *SARSCoV2VaccLastBrand*; *AdenoStoolDate*; *AdenoRespDate*; *AdenoWholeBloodDate*; *AdenoSerumDate*; *AdenoOtherDate*; *SARSCoV2PCRDate*; *Hospitalisation*; *AdenoUrineResult*; *AdenoUrineDate*; *AdenoUnknownSpecimenResult*; *AdenoUnknownSpecimenDate*; *AdenoCtValue*; *AdenoCtValueSpecimenDate*; *AdenotypeSpecimen*; *AdenoSeqDone*; *ADVSequence*; *OtherTypingResult*; *RhinoResult*; *hMPVResult*; *BrucellaResult*; *BartonellaResult*; *BorreliaResult*; *StoolBacterialPCRResult*; *AdditionalInfo*

Changes in coded value lists: Please refer to **Error! Reference source not found.**

INACTIVATED variables (from NOVHEP v1):

*ClinicalPresentation* - renamed to PreviousClinicalPresentation

*ClinicalPresentationOther* - renamed to PreviousClinicalPresentationOther

Adenotype – renamed to AdenovType

*PeakASP* – removed

**Record type NOVHEP Version 1 – 22 April 2022**

# NOVHEP metadata

The NOVHEP metadata, **record type version 3,** is used for reporting case-based data on hepatitis of unknown origin.

In the descriptions of the variables, the following conventions are used:

**VariableName**      Literal name of a variable. This never contains spaces. Case is only used to improve readability.

**Coding**             Code as accepted by the system.

**Description of code**   Description of the meaning of a possible values for a specific variable.

Example: The gender of a case is described in the variable **Gender**, that can have the possible values *M* for 'Male', *F* for 'Female', *O* for 'Other' and *Unk* for 'Unknown'.

# Common TESSy Variables

### RecordID (mandatory)

Unique case identifier (used in the country)

Coding:              Text (max 80 characters)

Please note that ID must be unique if they are derived from the same national reporting system; records with the same ID will be overwritten.

### RecordType (mandatory)

Structure and format of the data (case based reporting or aggregate reporting).

Coding:              NOVHEP'

### RecordTypeVersion

Indicates the version of the Record type used in the reported batch. If no RecordTypeVersion is provided in the batch, it is set automatically with current version of the Record type. RecordTypeVersion is required when no metadata set is provided at upload or when a RecordTypeVersion, other than the current one, needs to be used.

Coding:              NUM

### Subject (mandatory)

Subject of the data reported.

Coding:              NOVHEP = Novel hepatitis

### DataSource (mandatory)

The data source (surveillance system) that the record originates from.

Coding:              To be assigned by each country to an existing data source, or to a newly created one.

The data source specifies the surveillance system from which the data originates and is generated and revised/updated by the national focal point in each Member State. The descriptions of the surveillance systems submitted to TESSy (*section Data Sources*) will be used to assist with data interpretation. Make sure that the subject "NOVHEP" is associated with this data source.

---

### ReportingCountry (mandatory)

The country reporting the case(s).

Coding: International organization for standardization (ISO) 3166-1-alpha-2, (two-letter code)

(*See the coded values list*)

This variable identifies the country reporting the case.

### DateUsedForStatistics (mandatory)

The date used for statistics is date of reporting to national health authority.

Coding: yyyy-mm-dd

### Status

Status of reporting NEW/UPDATE or DELETE (inactivate). Default if left out: NEW/UPDATE. If set to DELETE, the record with the given recordId will be deleted from the TESSy database (or better stated, invalidated.) If set to NEW/UPDATE or left empty, the record is newly entered into the database.

Coding: [Statuses]:

DELETE = Delete a previously reported record

NEW/UPDATE = Report a new or update a previously reported record (default)

## Demographic variables

### Age (mandatory)

Age of patient in years as reported in the national system at the time of disease onset.

Coding: NUM

### AgeMonths

Age of patient in months as reported in the national system for cases < 2 years of age at the time of disease onset.

Coding: NUM

### Gender

Gender of the reported case.

Coding: Sex:

F = Female

M = Male

O = Other (e.g. transsexual)

Unk = Unknown

# Case classification

## Classification (mandatory)

Case classification according to agreed case definition.

Coding:        ClassificationNOVHEP

                PROB = Probable

                EPILINK = Epi-linked case

                DISC = Discarded case

# Clinical findings and outcomes

## PreviousClinicalPresentation (repeatable)

Clinical symptoms and signs in the four weeks preceding the onset of hepatitis.

Coding:        PrecedingSymptomsNOVHEP:

                CONJ = Conjunctivitis

                DIARR = Diarrhoea

                FEVER = History of fever / chills

                HEAD = Headache

                NONE = None

                O = Other, please specify

                RESP = Respiratory symptoms

                RASH = Rash

                SORETHR = Sore throat

                UNK = Unknown

                VOMIT = Nausea / vomiting

## PreviousClinicalPresentationOther

Other clinical symptoms and signs in the four weeks preceding the onset of hepatitis.

Coding:        TEXT

## PrevInfection

Patient had a confirmed acute infectious disease in the four weeks preceding the onset of hepatitis.

Coding:        YesNoUnk:

                N = No

                Unk = Unknown

                Y = Yes

If yes, please specify in PrevInfectionDetails.

## PrevInfectionDetails (repeatable)

Specify pathogen responsible for previous known acute infectious disease in the four weeks preceding the onset of hepatitis.

Coding:      ADENO = Adenovirus

          ASTRO = Astrovirus

          BOCA = Bocavirus

          CAMP = Campylobacter

          CMV = CMV

          COX = Coxsackie

          EBV = EBV

          ESCCOL = E. coli

          ENVI = Enterovirus

          HSV1 = HSV1

          HHV6 = HHV6

          HHV7 = HHV7

          METAPNEU = Metapneumovirus

          INFL = Influenza

          LEGI = Legionella

          LEPT = Leptospira

          NOROV = Norovirus

          O = Other, please specify

          OTHCOR = Other coronavirus (non SARS-CoV-2)

          PARAINFL = Parainfluenza

          PARVOV = Parvovirus

          ROTAV = Rotavirus

          RSV = RSV

          SALM = Salmonella

          SAPO = Sapovirus

          SHIG = Shigella

          YERS = Yersinia

          UNK = Unknown

## PrevInfectionDetailsOther

If other previous known acute infectious disease in the four weeks preceding the onset of hepatitis not included in PrevInfectionDetails, please specify.

Coding:      TEXT

## ClinicalSymptoms (repeatable)

Clinical symptoms and signs since onset of hepatitis.

Coding:     ClinicalSymptomsNOVHEP:

ANO = Anorexia / poor feeding

CONJ = Conjunctivitis

DARKU = Dark urine

DIARR = Diarrhoea

FEVER = Fever

HEAD = Headache

HEPATOME = Hepatomegaly

IRR = Irritability / confusion

JAUNDICE = Jaundiced

O = Other, please specify

PAINABDO = Pain – abdominal

RESP = Respiratory symptoms

RASH = Rash

SORETHR = Sore throat

STOBLO = Bloody stool

STOPAL = Pale stool

UNK = Unknown

VOMIT = Nausea / vomiting

WEAK = General weakness

## ClinicalSymptomsOther

Other reported clinical symptoms anytime during illness, not found in the list of possible values.

Coding:     TEXT

## Complications (repeatable)

Complications at any time.

Coding:     ALF = Acute Liver Failure

BMF = Bone Marrow Failure

RF = Renal Failure

HAEM = Haemorrhage

HEPENCEPH = Hepatic encephalopathy

COMA = coma

SEPSIS = Sepsis/Multi-organ failure

O = other

## ComplicationsOther

Other reported complications, not found in the list of possible values. Please separate using a semi-colon (;) if multiple.

Coding:     TEXT**DateOfOnset**

Date of onset of first symptoms of disease.

Coding: yyyy-mm-dd

## Hospitalisation

Whether the case was admitted to hospital.

Coding: YesNoUnk:

N = No

Unk = Unknown

Y = Yes

## DateOfHospitalisation

Date of Hospitalisation. If multiple hospitalisations, please indicate the first related to hepatitis.

Coding: yyyy-mm-dd

## DateOfDischarge

Date of discharge from hospital. If multiple hospitalisations, please use the end date of the most recent hospitalisation related to hepatitis.

Coding: yyyy-mm-dd

## AdmittedICUHDU

Whether admitted to intensive care unit or high-dependency unit.

Coding: YesNoUnk:

N = No

Unk = Unknown

Y = Yes

## AdmittedTransUnit

Whether case was admitted to transplant unit.

Coding: YesNoUnk:

N = No

Unk = Unknown

Y = Yes

## Transplant

Whether case received liver transplant.

Coding:

N = No

Unk = Unknown

WAITTRANS = Waiting for transplant

Y = Yes

## HistologyBiop

Liver histology results either from biopsy, removed organ or post mortem – please indicate including any immunohistochemistry for adenovirus or other infectious agents.

Coding:         TEXT

Ideally, results should be reported in English.

## Outcome (mandatory)

Information on the outcome of the case.

Coding:         OutcomeNOVHEP:

                ALIVE = Alive, recovered, cured

                DIEDHEP = Died due to severe acute hepatitis

                DIEDOTHER = Death not related to severe acute hepatitis

                DIEDUNK = Cause of death unknown

                STILLTREATMENT = Still on medical treatment (not recovered)

                UNK = Unknown outcome

## DateOfDeath

Date of death (exact date only).

Coding:         yyyy-mm-dd

## Precondition (mandatory) (repeatable)

Patient's underlying condition or conditions.

Coding:         PreconditionsNOVHEP:

                ASPL = Asplenia

                ASTH = Asthma

                AUTOIMMUNE = Autoimmune disease

                CANC = Cancer, malignancy

                CARDIACDIS = Cardiac disorder, excluding hypertension

                DIAB = Diabetes

                ENDO = Endocrine disease

                GASTRO = Gastrointestinal tract disease

                GENET = Genetic disorder

                HIV = HIV/other immune deficiency

                HYPERT = Hypertension

                KIDNEY = Kidney-related condition, renal disease

                IMMUN = immunosuppressed

                LIVER = Liver-related condition, liver disease

                LUNG = Chronic lung disease, excluding asthma

                METAB = Metabolic disorder

                NEUROMUS = Neuromuscular disorder, chronic neurological

                NONE = None

O = Other precondition, please specify

OBES = Obesity

PREG = Pregnant

TB = Tuberculosis

UNK = Unknown precondition

## PreconditionOther

Details of underlying conditions, if precondition is coded as 'other', but is known. Please separate using a semi-colon (;) if multiple.

Coding: TEXT

# Previous SARS-CoV-2 infection or vaccination

**PrevSARSCoV2**

Patient had a confirmed infection with SARS-CoV-2.

Coding:   Unk = Unknown

      Y = Yes

**DateOfPrevSARSCoV2**

Date of previous SARS-CoV-2 infection.

Coding:   yyyy-mm-dd (preferred)

      yyyy-Www

      UNK= Unknown

 If no exact date available, please provide an estimate.

**SARSCoV2VaccStatus**

Indicates if the case is vaccinated against SARS-Cov-2 and number of vaccine doses received.

Coding:   VaccStatusCOVID:

      1DOSE = 1 dose

      2DOSE = 2 doses

      3DOSE = 3 doses

      4DOSE = 4 doses

      DOSEUNK = Vaccinated with unknown number of doses

      NOTVACC = 0 doses - unvaccinated

      UNK = Unknown vaccination status

**SARSCoV2Serology**

Serology result for past SARS-CoV-2 infection during this episode of illness.

Coding:   SARSCoV2Serology:

      N = Negative

      NT = Not tested

      P = Positive unspecified

      IgM = IgM detected

      IgG = IgG detected

      IgMIgG = IgM and IgG detected

      IN = Indeterminate / equivocal

      UNK = Tested, but result unknown

      DK = Don't know if tested

# Laboratory findings

## AdenoStoolResult

Result of adenovirus test on stool specimen.

Coding:        LaboratoryResultNOVHEP:

        N = Negative

        NT = Not tested

        P = Positive

        IN = Indeterminate / equivocal

        UNK = Tested, but result unknown

        DK = Don't know if tested

## AdenoStoolDate

Date of adenovirus test on stool specimen. In case of multiple specimens, indicate first date (if all negative) or date of first positive result.

Coding:        yyyy-mm-dd

        UNK= Unknown

## AdenoUrineResult

Result of adenovirus test on urine specimen.

Coding:        LaboratoryResultNOVHEP:

        N = Negative

        NT = Not tested

        P = Positive

        IN = Indeterminate / equivocal

        UNK = Tested, but result unknown

        DK = Don't know if tested

## AdenoUrineDate

Date of adenovirus test on urine specimen. In case of multiple specimens, indicate first date (if all negative) or date of first positive result.

Coding:        yyyy-mm-dd

        UNK= Unknown

## AdenoRespResult

Result of adenovirus test on respiratory specimen.

Coding:        LaboratoryResultNOVHEP:

        N = Negative

        NT = Not tested

        P = Positive

        IN = Indeterminate / equivocal

UNK = Tested, but result unknown

DK = Don't know if tested

## AdenoRespDate

Date of adenovirus test on respiratory specimen. In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:        yyyy-mm-dd

UNK= Unknown

## AdenoWholeBloodResult

Result of adenovirus test on whole blood specimen.

Coding:        LaboratoryResultNOVHEP:

N = Negative

NT = Not tested

P = Positive

IN = Indeterminate / equivocal

UNK = Tested, but result unknown

DK = Don't know if tested

## AdenoWholeBloodDate

Date of adenovirus test on whole blood specimen. In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:        yyyy-mm-dd

UNK= Unknown

## AdenoSerumResult

Result of adenovirus test on serum specimen.

Coding:        LaboratoryResultNOVHEP:

N = Negative

NT = Not tested

P = Positive

IN = Indeterminate / equivocal

UNK = Tested, but result unknown

DK = Don't know if tested

## AdenoSerumDate

Date of adenovirus test on serum specimen. In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:        yyyy-mm-dd (preferred)

UNK= Unknown

## AdenoOtherResult

Result of adenovirus test on other specimen (not stool, respiratory, blood, plasma).

Coding:        LaboratoryResultNOVHEP:

        N = Negative

        NT = Not tested

        P = Positive

        IN = Indeterminate / equivocal

        UNK = Tested, but result unknown

        DK = Don't know if tested

## AdenoOtherDate

Date of adenovirus test on another specimen (not stool, respiratory, blood, plasma). In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:        yyyy-mm-dd

        UNK= Unknown

## AdenoUnknownSpecimenResult

Result of adenovirus test where type of specimen is unknown.

Coding:        LaboratoryResultNOVHEP:

        N = Negative

        NT = Not tested

        P = Positive

        IN = Indeterminate / equivocal

        UNK = Tested, but result unknown

        DK = Don't know if tested

## AdenoUnknownSpecimenDate

Date of adenovirus test where type of specimen is unknown. In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:        yyyy-mm-dd

        UNK= Unknown

## AdenoCtValue

Ct (cycle threshold) value of adenovirus in blood or serum. If multiple results, indicate the lowest value.

Coding:        NUM

## AdenotypeDone

Whether adenovirus typing was done.

Coding: YesNoUnk:

N = No

Unk = Unknown

Y = Yes

## AdenotypeSpecimen

Type of specimen on which adenovirus typing was done.

Coding: SpecimenNOVHEP:

BLOOD = Blood

SERUM = Serum

RESP = Respiratory

STOOL = Stool

O = Other

URINE = URINE

Unk = Unknown

## AdenovType

Result of adenovirus typing.

Coding: TEXT

## AdenoSeqDone

Whether adenovirus sequencing was done.

Coding: YesNoUnk:

N = No

Unk = Unknown

Y = Yes

## MetagenomicsLabID

In case there were metagenomics results submitted to Epipulse, please provide Lab ID in this field (unique in the country, including a prefix for country of origin)

Coding: TEXT

## AdenoAssociatedVirusResultPCR

Result of PCR test for adeno-associated virus

Coding: LaboratoryResultNOVHEP:

N = Negative

NT = Not tested

P = Positive

IN = Indeterminate / equivocal

UNK = Tested, but result unknown

DK = Don't know if tested

## AdenoAssociatedVirusSpecimen

Type of specimen on which adeno-associated virus typing was done.

Coding:        SpecimenNOVHEP:

BLOOD = Blood

SERUM = Serum

RESP = Respiratory

STOOL = Stool

O = Other

URINE = URINE

Unk = Unknown

## AdenoAssociatedVirusType

Adeno-associated virus type or types identified

Coding:        TEXT

## AdenoAssociatedVirusCtValue

Ct (cycle threshold) value of adeno-associated virus. If multiple results, indicate the lowest value.

Coding:        NUM

## AdenoAssociatedVirusSpecimenDate

Date of adeno-associated virus sample. on which the lowest Ct (cycle threshold) value was measured.

Coding:        yyyy-mm-dd (preferred)

UNK= Unknown

## SARSCoV2PCR

Result of PCR for SARS-CoV-2 (after onset of hepatitis).

Coding:        LaboratoryResultNOVHEP:

N = Negative

NT = Not tested

P = Positive

IN = Indeterminate / equivocal

UNK = Tested, but result unknown

DK = Don't know if tested

## SARSCoV2PCRDate

Date of SARS-CoV-2 PCR test (after onset of hepatitis). In case of multiple specimens, indicate first date (if all negative) or first date of positive result.

Coding:          yyyy-mm-dd (preferred)

                    UNK= Unknown

## HHV6Result

Whether HHV6 test was done during this episode of illness and what the result was.

Coding:          LaboratoryResultNOVHEP:

                    N = Negative

                    NT = Not tested

                    P = Positive

                    IN = Indeterminate / equivocal

                    UNK = Tested, but result unknown

                    DK = Don't know if tested

## StoolViralPCRResult

Whether viral stool PCR was done during this episode of illness and what the result was.

Coding:          StoolViralPCRNOVHEP:

                    N = Negative

                    NT = Not tested

                    ADENO = Adenovirus detected

                    SAPO = Sapovirus detected

                    NORO = Norovirus detected

                    ENTERO = Enterovirus detected

                    ROTA = Rotavirus detected

                    ASTRO = Astrovirus detectedO = Other

                    UNK = Tested, but result unknown

## StoolVirCultDone

Whether viral stool culture was done during this episode of illness.

Coding:          YesNoUnk:

                    N = No

                    Unk = Unknown

Y = Yes

**StoolVirCultResult**

Result of viral stool culture during this episode of illness.

Coding:          TEXT

**AdditionalInfo**

Any other relevant laboratory or clinical information not included in any other variable.

Coding:          TEXT

# Epidemiological links and travel history

**EpiLink**

Epidemiological link to other case.

Coding:          YesNoUnk:

                 N = No

                 Unk = Unknown

                 Y = Yes

**EpiLinkCaseID**

Unique case identifier (*RecordID* used in the country) of other case to which there is an epidemiological link.

Coding:          TEXT

**Travel**

Whether the case has travelled to another country or region in the 30 days prior to symptom onset.

Coding:          YesNoUnk:

                 N = No

                 Unk = Unknown

                 Y = Yes

Regular domestic travels (such as daily commutes) should not be considered for this purpose.

**TravelLocation**

Location of travel in the 30 days prior to symptom onset.

Coding:          TEXT
