

# SMARTER TOOLS, STRONGER HEALTHCARE SYSTEMS.

hyFive is a digital hand hygiene monitoring tool that replaces manual paper-based tracking.

It helps healthcare facilities improve infection prevention and control (IPC).

hyFive equips healthcare teams with modern tools to improve patient safety.

## How hyFive works

**Easy to setup,  
easy to scale**

Installed at the hospital and public health authority.

**Fast data entry and  
visualisations**

Compliance rates easily shown across units and departments.

**National  
overview**

Real-time compliance data at national level.

## Benefits

### For national authorities

- Real-time nationwide overview of hand hygiene compliance
- Transparent, standardised data across facilities
- Access anytime, anywhere

### For healthcare facilities

- Supports accreditation, audits, and regulatory requirements
- Enables timely, data-driven safety decisions

### For IPC professionals

- No paperwork
- Faster documentation
- Automatic reports and visualisations

# hyFive at a glance

---

## 1 A standardised system connected to a centralised database

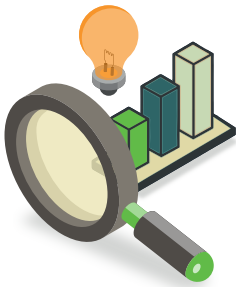

Data can be collected, stored, and analysed in real time. hyFive can be implemented from individual wards to entire hospitals, or across national healthcare systems.

## 2 Digital observation

Hand hygiene observations are instantly captured using an intuitive mobile interface – no paper, no delay.

## 3 Real-time insights

Compliance data are immediately visible at hospital and national levels through dynamic graphs, providing insight into compliance levels.

## 4 Faster data-driven decisions

Real-time data and trends enable faster evidence-based decisions, supporting targeted interventions and effective resource allocation across health systems.
